WHAT IS CLAIMED IS:

1.   An electronic apparatus comprising:

a display section for displaying image;

a housing means for housing a plurality of types of constitutive elements utilized in generation of generated information for generating a program for display of image on said display section, and for housing selected display information for selection of a constitutive element from said plurality of types of constitutive elements on said display section;

a selection means for selecting a constitutive element from said plurality of types of constitutive elements, according to said selected display information displayed on said display section; and

a generation means for generating said generated information based on a result of selection by said selection means and generating said program based on said generated information.

2.   The apparatus according to claim 1, wherein said selection means selects and displays on said display section a plurality of selected display information from said plurality of selected display information housed in said housing means, if there is a plurality of selected display information housed in said housing means.

3.   The apparatus according to claim 2, wherein said selection means makes display on said display section, selected display information other than said selected and displayed selected display information.

4.   The apparatus according to claim 1, wherein said housing means houses a program generated by said generation means.

5   5.   An electronic apparatus comprising:
        a display section for displaying image;
        a housing means for housing a plurality of generation information for generating a program for display of image on said display section, and for housing selected display
10   information for selection of a piece of generation information from said plurality of generation information on said display section;
        a selection means for selection of a piece of generation information from said plurality of generation information, according to said selected display information displayed on said
15   display section; and
        a generation means for generating said program based on a result of said selection.

20   6.   A program generation method comprising:
        a housing step of housing a plurality of types of constitutive elements utilized in generation of generated information for generating a program for display of image on a display section, and of housing selected display information for
25   selection of a constitutive element from said plurality of types of constitutive elements on said display section;
        a selection step of selecting a constitutive element from said plurality of types of constitutive elements, according to said selected display information displayed on said display
30   section; and
        a generation step of generating said generated

information based on a result of selection by said selection step and generating said program based on said generated information.

5   7.   The method according to claim 6, wherein said selection step selects and displays on said display section a plurality of selected display information from said plurality of selected display information housed in said housing step, if there is a plurality of selected display information housed through said

10   housing step.

8.   The apparatus according to claim 7, wherein said selection step makes display on said display section, selected display information other than said selected and displayed

15   selected display information.

9.   A program generation method comprising:

      a housing step of housing a plurality of generation information for generating a program for display of image on a

20   display section, and of housing selected display information for selection of a piece of generation information from said plurality of generation information on said display section;

      a selection step of selection of a piece of generation information from said plurality of generation information,

25   according to said selected display information displayed on said display section; and

      a generation step of generating said program based on a result of said selection.

30
